

Millennium-WAF TBI Project

My name is Ryan Louviere. I joined the military in 2006 in the Army out of Fort Campbell, KY 101st Airborne Division. During my 7 years in the service I was exposed to numerous IED blasts in which I was within 50ft of the blast. I also was injured by a suicide bomber where the blast was about 10ft from me on foot and I sustained a TBI injury, concussion and numerous nerve and soft tissue shrapnel wounds to my body.

Due to these injuries I was placed on easily over 10 different medications which did not fully help with my emotional, cognitive or physical functioning. In fact, these medications did not stop my thoughts of possible suicide on numerous occasions. Due to my progressive worsening of emotional stability I have had serious social issues where I have a strained relationship with my wife and have lost many good friends due to my bouts of depression and lack of wanting to be in social settings. In November of 2015 I was introduced to the Warrior Angels Foundation and Dr. Mark L. Gordon through their fantastic interviews on the Joe Rogan experience Podcast. I have now been in the program for around 14 months now and have achieved the following improvements:

Since beginning my treatments with Dr. Gordon and implementing the daily supplements I have completely stopped taking all of my prescription pain medication and depression medications finding it easier to cope with things and motivation increases for daily productivity. The only medication I still continue to take is for my chronic severe migraines as needed at the onset. I have seen some great improvements in my daily life and relationship. I find it easier to get to the gym and have the energy to do that as well as going back to online college courses.

Based upon a 70% percent improvement in my condition using the treatment protocol, I highly recommend that you look closely at the program and protocols that the Millennium-Warrior Angel Foundation's TBI Project has to offer. Other veterans and active service personnel can benefit from this fresh approach. It is important to look at the results before judging it as unsubstantiated science, since it is all based upon science that has been written about but not read. The answers and means for helping us veterans are there.

Thank you

Ryan Louviere
